When to use U*vita?

	Indications	Treatment	Dosage
Adults	<p>Dogs fed on premium feed.</p> <p>Dogs fed on medium-low range feed or homemade diets.</p>	<p>No need to use vitamin supplements.</p> <p>U*vita tablets: Whenever a decrease in vitality is detected (geriatric dogs) or there are increased nutritional needs (intense activity, chronic infectious and parasitic processes such as leishmaniasis). To satisfy the expectations of the owner in aspects related to the vitality of their pet.</p> 	<p>Treat for 15-20 days:</p> <p>½ tablet/day for small breeds</p> <p>1 tablet/day for medium-sized breeds</p> <p>2 tablets/day for large breeds</p>
Puppies	<p>Puppies originating from imports with a dubious health status.</p> <p>The weakest puppies in a litter.</p>	<p>Vitamin and energy shock treatment with U*vita oral Gel + standard medical protocol.</p>  <p>Providing vitamins, minerals and essential fatty acids with U*vita oral gel.</p> 	<p>Small breed puppies: 1 cm of gel, twice a day for the first 2 days and 1cm once a day for 5 more days. Medium sized and large breed puppies: 2 cm of gel, twice a day for the first 2 days and 2 cm once a day for 5 more days.</p> <p>Small breed puppies: 1/2 cm of gel, twice a day for 3-5 days. Medium sized and large breed puppies: 1 cm of gel, twice a day for 3-5 days.</p>
Gestation and lactation	<p>Gestating bitches.</p> <p>Lactating bitches.</p>	<p>U*vita oral Gel until a week before giving birth.</p>  <p>U*vita oral Gel until weaning.</p> 	<p>2 cm/5 kg of weight per day.</p> <p>2 cm/5 kg of weight per day.</p>
Convalescence	<p>Providing energy for hospitalised dogs.</p> <p>Following surgery and infectious and parasitical infections.</p>	<p>U*vita oral gel as an energy supplement with easily absorbed carbohydrates and fatty acids.</p>  <p>U*vita oral gel as a vitamin supplement to promote recovery and a return to normal.</p> 	<p>4 cm/5 kg of weight per day, spread over various doses.</p> <p>2 cm/5 kg weight per day in one dose for 5-10 days.</p>
Sporting and hunting dogs	<p>Before the hunting season or sporting contest.</p> <p>One hour before the day's hunting or sporting contest.</p>	<p>U*vita tablets</p>  <p>U*vita oral gel</p> 	<p>Treating for 15-20 days:</p> <p>½ tablet/day for small breeds</p> <p>1 tablet/day for medium-sized breeds</p> <p>2 tablets/day for large breeds</p> <p>4 cm/5 kg weight 1-2 hours before sporting contest or day's hunting.</p>

 CAT	Indications	Treatment	Dosage
Adults	Cats with no appetite, that are poorly fed, with dull and altered skin and coat.	U*vita oral gel for 15-20 day cycles. 	2 cm/cat per day.
	Aiding intestinal transit and preventing formation of hair balls in breeds prone to forming trichobezoars. Providing taurine and Omega 6 to encourage a shiny coat and skin.	U*vita malt. 	2-3 cm of paste administered 2-3 times per week between meals.
Kittens	Kittens adopted from stray cats or the smallest and weakest in a litter.	Providing vitamins, minerals and essential fatty acids with U*vita Oral gel for cats + regular health protocol. 	½ cm of gel, twice a day for 2 days and ½ cm a day for 5 more days.
Gestation and lactation	Gestating cats.	U*vita oral gel up to 1 week before birth. 	2 cm/day
	Lactating cats.	U*vita oral gel until weaning. 	2 cm/day
Convalescence	Providing energy for hospitalised cats.	U*vita oral gel for cats as an energy supplement with easily absorbed carbohydrates and fatty acids. 	4 cm/adult cat per day spread over various doses.
	After surgery or infectious and parasitical processes.	U*vita oral gel as a vitamin supplement to promote recovery and return to normality. 	2 cm/adult cat per day in one dose for 5-10 days.

U*vita tablets

Contents per tablet: Vitamin A 900 U.I.; Vitamin B1 400 µg; Vitamin B2 400 µg; Vitamin B6 200 µg; Vitamin B12 6 µg; Vitamin C 20 mg; Vitamin D 90 U.I.; Vitamin E 10 mg; Pantothenic acid 450 µg; Niacin 1.8 mg; Iron 3 mg; Copper 750 µg; Cobalt 250 µg; Manganese 1mg; Zinc 1mg; all 300 µg; Magnesium 4 mg; Phosphorus 186 mg; Calcium 240 mg; Ginseng (Panax Ginseng C.A Meyer) 10 mg; Ginkgo Biloba 4 mg.

Indications: U* vita is a nutritional supplement specially designed for use in pets which, thanks to the combination of vitamins, minerals, Ginseng extract and Ginkgo Biloba, acts effectively to prevent deficiency diseases. Its use is particularly indicated in dogs that have increased nutritional needs due to growth, intense activity, disease, treatment with antibiotics, loss of appetite, or any other organic process where the nutritional needs are increased or an extraordinary nutritional contribution is required. In addition to containing 10 vitamins and 9 minerals that are essential for the maintenance of vital functions, it incorporates extract of Ginseng and Ginkgo Biloba.

Ginseng and Ginkgo Biloba are well known for their properties as antioxidants and as stimulants of the central nervous system, helping to increase brain activity, improve performance and combating asthenia.

Contraindications: not to be administered together with vitamin D supplements without consulting a veterinarian.

Method of administering: U*vita is administered directly by mouth or mashed or chopped up in food.

Dosage: ½ tablet/day for small breeds. 1 tablet/day for medium-sized breeds. 2 tablets/day for large breeds. The tablets are dividable to adjust the dosage to different weights. A treatment period of 15.20 days is recommended.

Other recommendations: follow the instructions of the veterinarian at all times.

Preservation method: keep the container closed at all times and store in a cool dry place.

Presentation: bottle with 50 tablets.

U*vita oral gel for dogs

Contents per 100g: Vitamin A 27,500 U.I.; Vitamin B1 5,000 µg; Vitamin B2 25,000 µg; Vitamin B6 5,000 µg; Vitamin B12 125 µg; Pantothenic acid 55,000 µg; 62,500 Niacin µg; Vitamin D 1,000 IU; Vitamin E 275 mg; Folic acid 1,000 µg; Calcium 4.4 mg; Phosphorus 3.5 mg; Potassium 2.8 mg; Iron 25 mg; Cobalt 2 mg; Manganese 7.5 mg; Zinc 7.5 mg; Iodine 2.5 mg; Taurine 125 mg; Biotin 25 mg; Gamma linolenic acid 400 mg. Energy: 550 Kcal/ 100 g.

Indications: U*vita oral gel is a highly palatable nutritional supplement especially designed for use in dogs, which, thanks to the combination of vitamins, minerals, taurine and Omega 6 essential fatty acids, makes an extraordinary energy and nutrition contribution to the usual diet in dogs with deficiencies or increased nutritional needs. It is especially suitable for bitches during gestation and lactation, for the weaker puppies in a litter, for dogs in post operative convalescence, after suffering from a disease, and to stimulate appetite in dogs with no appetite. In addition, due to its content in essential fatty acids, biotin and zinc, it helps to keep hair and skin in good condition, thereby promoting a soft and shiny coat.

Contraindications: not to be administered together with other vitamin D supplements.

Method of administering: U*vita oral gel is administered either directly by mouth or in food. It has an excellent palatability, and therefore in most cases ingestion of the dose will be voluntary. In the event of rejection, conceal the gel in a type of food that is very appealing to the pet.

Dosage: administer 2cm of gel for every 5kg of live weight per day. In the case of convalescent dogs that do not have another additional source of food, 4cm of gel/5 kg of weight per day is recommended, applied in several doses.

Preservation method: keep the container closed at all times and store in a cool dry place.

Presentation: tube with 50g.

U*vita oral gel for cats

Contents per 100g: Vitamin A 27,500 U.I.; Vitamin B1 5,000 µg; Vitamin B2 25,000 µg; Vitamin B6 5,000 µg; Vitamin B12 125 µg; Pantothenic acid 55,000 µg; 62,500 Niacin µg; Vitamin D 1,000 IU; Vitamin E 275 mg; Folic acid 1,000 µg; Calcium 4.4 mg; Phosphorus 3.5 mg; Potassium 2.8 mg; Iron 25 mg; Cobalt 2 mg; Manganese 7.5 mg; Zinc 7.5 mg; Iodine 2.5 mg; Taurine 125 mg; Biotin 25 mg; Gamma linolenic acid 400 mg. Energy: 550 Kcal/ 100 g.

Indications: U*vita oral gel is a highly palatable nutritional supplement especially designed for use in cats, which, thanks to the combination of vitamins, minerals, taurine and Omega 6 essential fatty acids, makes an extraordinary energy and nutrition contribution to the usual diet in cats with deficiencies or increased nutritional needs. It is especially suitable for female cats during gestation and lactation, for the weakest kittens in a litter, for growing cats, for cats not obtaining a balanced diet, for cats in post operative convalescence, after suffering from a disease, and to stimulate appetite in cats with no appetite. In addition, due to its content in essential fatty acids, biotin and zinc, it helps to keep hair and skin in good condition, thereby promoting a soft and shiny coat.

Contraindications: not to be administered together with other vitamin D supplements.

Method of administering: U*vita oral gel is administered either directly by mouth or in food. It may also be deposited on the cat's snout, as the animals will tend to lick it and ingest it as part of their cleaning habits. It is highly palatable, and therefore in most cases ingestion of the dose will be voluntary. In the event of rejection, conceal the gel in a type of food that is very appealing to the pet.

Dosage: administer an amount equivalent to 1cm of gel in kittens and 2cm for adult cats, per day. In the case of convalescent cats that do not have another additional source of food, 4cm of gel per day is recommended, applied in several doses.

Preservation method: keep the container closed at all times and store in a cool dry place.

Presentation: tube with 50 g.

U*vita malt + Omega 6 + Taurine

Ingredients: extract of cereals, mineral oils, water, taurine.

Indications: as part of their natural habits, cat spends long hours licking and grooming themselves. During this toilet, a cat swallows lot of dead hair, which mixes with the food, becoming increasingly compact and eventually accumulating in the digestive tract, and this can cause obstructions and other severe intestinal problems. U*vita malt is a highly appetising nutritional supplement in the form of a paste which, due to its laxative and lubricating properties, aids intestinal transit by helping the natural expulsion of hairballs and prevents constipation. U*vita malt is supplemented with taurine, which is an essential amino acid for cats that cannot be synthesised from other amino acids and so enough has to be administered in the diet. In addition, due to its content in essential Omega 6 fatty acids, it helps to keep hair and skin in good condition, thereby promoting a soft and shiny coat.

Method of administering: U*vita malt is administered orally, by depositing the recommended dose on either of the front paws or on the snout. The product has a highly viscous consistency, causing it to stick to the fur, and the cat will tend to lick it as part of its cleaning habits. U*vita malt is highly palatable, and can therefore be administered directly by mouth or mixed with the cat's usual food.

Dosage: administer 2-3 cm of gel, 2-3 times a week between meals.

Other recommendations: follow the instructions of the veterinarian at all times.

Preservation method: keep the container closed at all times and store in a cool dry place.
